Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Fortin (5457898).

Fortin shows a shoe comprising a sole (12), a toe cap (15), an upper (14), and a metatarsal guard (11) with a convex arch/instep portion (shown in figure 1), and a single right and complementary left leg (side portions which lead to the edge 13) as claimed. In reference to the limitations of “only a single”, the fact that the single legs shown in Fortin include a slit does not increase the number of legs, and/or the portion forward of the slit can be considered to be a front flange or part of the leg which overlies the toe cap. In reference to the limitations of “said convex arch portion having a section immediately rearward of the support legs which does not bear against the sole, Fortin clearly shows such at the location of the arrow from number 10 in figure 2. In reference to the limitation of “having no openings therein”, the metatarsal guard of Fortin does not have any openings therein, i.e. there are no openings within the periphery of the guard, it is a solid element without holes or openings therein.

3. Claims 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Krajcir (4908963).

Krajcir shows a shoe with a toe cap (8), sole (5-7), and a metatarsal guard (figure 2b) which has a single concave right support leg (formed by 10, 11, and 14), and a single left support leg (formed by 10, 11, and 14), both legs show a section immediately rearward of the support legs

Art Unit: 3728

which does not bear against the sole (clearly shown in figure 2b), a lip (front element 10) which overlies the toe cap (see figure 1), and the bottom of the legs contacting the top of the sole (shown in figure 1) as claimed. In reference to the limitation of "having no openings therein", the guard of Karjcir shown in figure 2b does not have any openings therein.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fortin.

If applicant argues that the legs of Fortin are not considered to be "only a single..." because of the flexibility slit (19) formed in the legs, it has been held that omission of an element and its function in a combination where the remaining elements perform the same functions as before involves only routine skill in the art. In re Karlson, 135 USPQ 184. It would have been obvious to remove the slit (19) from the shoe of Fortin to provide a stronger and stiffer shoe.

Response to Arguments

6. Applicant's arguments filed 9/8/03 have been fully considered but they are not persuasive.

In response to applicants' arguments that the prior art shows additional structures, In response to applicants' arguments the neither Fortin or Krajcir shows legs which are of less width than the convex arch portion, both references clearly show such in the drawings.
